

CONTINENTAL

PIPE & TUBE CUT-OFF MACHINES

We Make the Cut, Fast and Clean!

PDS Series Automatic Tube Feeder Systems

Continental cut-off machines cut pipe and tube quickly and cleanly using the unique rotary cut-off method. This method and our machines have a number of benefits over other processes:

- Because the blade only passes through the tube's wall thickness, not the entire diameter, cuts are much faster than band saws, cold saws, etc.
- No chips are created and usually no coolant is required, so your parts and the work area stay clean. No chips, No mess, No hassle!
- The cut is smooth and clean with minimal burrs, so secondary de-burring operations can often be eliminated.

Visit our website at www.continentalcutoff.com to learn more about rotary tube cutting!

Programmable, automatic tube feeders are available for all Continental pipe and tube cut-off machines. From simple "one-stick-at-a-time" feeders to complete tube bundle to cut parts systems.

- One-stick-at-a-time, programmable tube feeders allow you to manually load one stock length into the feeder. The unit will then feed and cut the tube into programmable lengths.
- More complete systems include tube bundle-loading. You place a complete bundle of tubes into the feeder. The system will feed one tube length at a time into the feeder rolls and then feed that tube into the cut-off machine to be cut into programmable lengths.
- A tube storage table can be provided. In this case the operator manually loads tube lengths onto the table. The system will feed one tube length at a time into the feeder rolls and then feed that tube into the cut-off machine to be cut into programmable lengths. By simply keeping the storage table loaded, the machine will run continuously.
