PIPE & TUBE CUT-OFF MACHINES

We Make the Cut, Fast and Clean!

Series 500 Tube Support System

Continental cut-off machines cut pipe and tube quickly and cleanly using the unique rotary cut-off method. This method and our machines have a number of benefits over other processes:

- Because the blade only passes through the tube's wall thickness, not the entire diameter, cuts are much faster than band saws, cold saws, etc.
- No chips are created and usually no coolant is required, so your parts and the work area stay clean. No chips, No mess, No hassle!
- The cut is smooth and clean with minimal burrs, so secondary de-burring operations can often be eliminated.

Our Series 500 Tube Support System is a modular system, designed to provide tube storage and support for our Model 3A, 3H, 6A and 6H cutoff machines. It is intended to be used where the expense of an automatic tube feeding system cannot be justified.

This system permits an operator to load the tubing into the tube rack, index each tube into the tube feed section, and manually feed the tube into the cut-off machine.

The 500 Series tables are very popular with Continental customers and include a large storage rack that can be stocked with lengths of tubing to be cut. Their modular construction allows you to specify a support system for any cutoff job within the Model 3 and Model 6 machines' range. Virtually any stock length of tubing can be accommodated.

The primary benefit is a reduction in the loading time of the tubing (multiple versus single pieces) and the improved feeding of the tube into the cut-off machine.

Standard Series 500 Tube Support System Models **for material weighing up to 20 pounds per foot**

<u>Length Capacity</u>	For 7/8" to 4-1/2" OD Material	For 4-1/2" to 7-1/2" OD Material	For 7/8" to 7-1/2" OD Material
9 feet	Model 510	Model 520	Model 530
15 feet	Model 511	Model 521	Model 531
21 feet	Model 512	Model 522	Model 532
6 feet (additional)	Model 515	Model 525	Model 535
