PIPE & TUBE CUT-OFF MACHINES

WE MAKE THE CUT - FAST & CLEAN

A DIVISION OF KIENE DIESEL ACCESSORIES, INC.

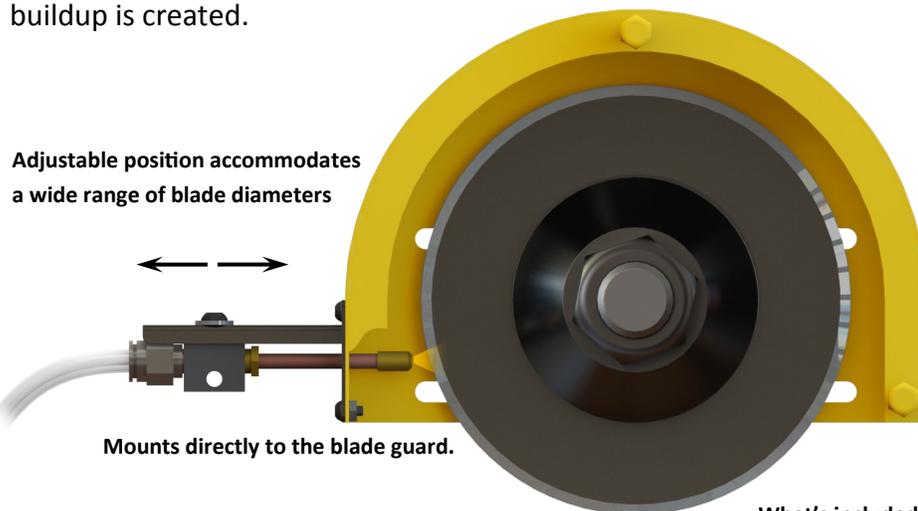

MIST LUBRICATION KIT

AVAILABLE FOR NEW AND EXISTING MACHINES!

NEW!

Continental is proud to introduce the newest option for its Model 3A and 6A cut-off machines. A mist lubrication system that's simple to setup and integrates seamlessly with your Continental cut-off machine's operation. The Model 310 utilizes *Minimum Quantity Lubrication* to provide a host of benefits without creating a mess on your parts or in your shop.

How does it work? The Model 310 injects small amounts of cutting lube into an airstream to produce a fine oil mist that is sprayed directly on to the cut-off blade. This reduces friction and heat allowing the blade to cut the tube more cleanly and easily. Lubricant is applied only during the cut so that no oil is wasted and no messy buildup is created.

- **Increased blade life**
- **Reduced cutting time**
- **Easy to install and set up**
- **Cleaner cuts and reduced burr**
- **100% natural and biodegradable lubricant**
- **Minimum lube usage means no mess and less cost**

What's included:

Pump enclosure and mounting plate
Spray nozzle, hose, and mounting bracket
Pneumatic fittings and tube
Wiring kit
Fasteners
